

Untitled

Welcome_to_Lightning.cmp:

```
-----
<aura:component
implements="force:appHostable,flexipage:availableForAllPageTypes,flexipage:avail
ableForRecordHome,force:hasRecordId,forceCommunity:availableForAllPageTypes
force:lightningQuickAction" access="global">
  <div>

    <p> Hello Friends Welcome to this course on lightning components </p>
  </div>
</aura:component>
```

Paaa.app:

```
-----
<aura:application>
  <div>
    <p> This text is from application level markup </p>
  </div>

  <!-- Call the components-->
  <c:Welcome_to_Lightning />
</aura:application>
```

4.Reusability of Components and Role of Attributes:

if we want to make our component more dynamic we need to use attributes in our components

```
<aura:component
implements="force:appHostable,flexipage:availableForAllPageTypes,flexipage:avail
ableForRecordHome,force:hasRecordId,forceCommunity:availableForAllPageTypes
force:lightningQuickAction" access="global">
  <aura:attribute name="displayText" type="String" default="Text1"
  <div>

    <p> Hello Friends Welcome to this course on lightning components </p>
  </div>
</aura:component>
```
